El proceso de templado mediante chorros de aire frío fortalece la estructura molecular del vidrio y le proporciona características especiales. El vidrio templado es **hasta 10 veces más duradero** que el vidrio convencional.

The tempering process through cold air streams builds up glass molecular structure and provides special features for the material. Tempered glass is up to 10 times more durable than standard glass.

ÓPTIMO ESPESOR

El espesor de la pared se reparte de manera homogénea y en sentido decreciente hacia el borde, así logramos la dureza óptima y una sonoridad especial que seduce al oído experto.

CORTE LÁSER

Con esta técnica conseguimos un acabado perfecto, de manera que nuestro sentido del gusto se centra exclusivamente en la experiencia de saborear el vino.

DISEÑO MEJORADO

Las formas cónicas contribuyen a un servicio de mesa eficiente, favorecen la correcta oxigenación del vino y dirigen los aromas hacia nuestro sentido del olfato.

MÁXIMO BRILLO Y TRANSPARENCIA

Este nivel superior de nitidez y luminosidad que cautiva a la vista solo es posible con una materia prima totalmente libre de impurezas y un proceso de fabricación minucioso.

PIE ESTIRADO

Mediante esta técnica alcanzamos la proporción ideal entre elegancia y resistencia además del tacto único de las cristalerías fabricadas en una sola pieza.

Las copas Atenea han sido **tratadas especialmente** con el fin de mejorar aun más su comportamiento y usabilidad.

Se ha reducido el espesor del borde para hacerla más agradable en boca sin perder resistencia.

El pie está reforzado para incrementar la vida útil de la copa.
